Budgetary Requirements

Budgets to be used in Agri-tourism Development of STII will depend on the area to be developed and used in every component and the time when this development plan will be commenced. Thus, budget estimates can't provide as of now. It is just necessary that in the development of each component, financial records will be maintained.

Prepared By:

Dr. ASTERIO R. SALIOT, MNSA, Ph.D.
STII Consultant

Mini-forest

A mini-forest will also be established and planted with assorted fruit trees and indigenous forest trees. This mini-forest will help regenerate the environment and attract birds and other animal species.

Farmers Information Technology System (FITS)

As the Philippine is highly dependent in agriculture and farming, establishment of a FITS Center equipped with necessary materials to provide information to our farmers and fisherfolks is one big step that can be done by STII to help our farmers and fisherfolks much more the communities. After all, many students of STII are believed to be sons and daughters of farmers and fisherfolks. FITS is also a big help to neighboring communities, thus, performing the function of Extension or Community Service.

Assessment Center for TESDA Courses

With the establishment of an Assessment Center, STII will bolster its capability of producing knowledgeable and skilled professionals. Moreover, it will also lessen the cost of students who are taking vocational-technical courses in acquiring a TESDA competency certificate. The Center will also capacitate would be assessors and enhance their expertise.

Electronic Extension

Similar to FITS Center, Electronic Extension which is composed of on-line courses, farmers contact or call center and on-line or electronic marketing will not only help bolster the capabilities of our farmers and fisherfolks but also provide them opportunities to become entrepreneurs.

Trading post/Agriculture Product Marketing

This component can complement with that of on-line trading or marketing. When this component will expand in the future, the trading post can be computerized similar to the Philippine Stock Exchange. Equipped with various computer gadgets, all products brought to the trading post will indicate the volume, prices, and producers of the products, thus, its product traceability which are both beneficial to producers and consumers.

Organic fertilizer, concoctions, feeds, and methane gas

Production of these various organic products and methane gas will not only lower the cost of production of STII Agri-tourism area but also help people in the communities where extension can be rendered. Moreover, this will also help in restoring clean and pristine environment, a project that can later on be submitted to world Environmental forum as a carbon sequestration activity and therefore can be monetized.

Diploma Courses in Farm Business Management and Entrepreneurship

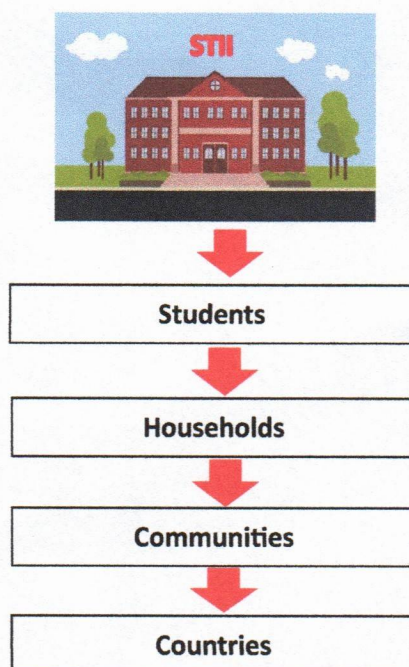

These two diploma courses will not only expand the course offerings of STII. These two courses will help prepare future generations of farmers courses and fisherfolks to be entrepreneurs. When farming and fishing will become an enterprise, many young people will be encouraged to engage in farming and fishing as there is money in the industry and allow them to earn income.

2. Scope of Program Implementation

3. Program Implementation Approach

Crops

Areas for rice, corn, assorted vegetables, dwarf coconut, container gardening and vertical farming will be properly identified, selected, and developed. Farm workers must be hired and trained in the propagation and maintenance of the crops. Dwarf coconuts will be used for tourists in the future.

Livestock

Similarly, areas where livestock will be raised particularly goat, sheep, deer and Swine will be properly established. Complementing the livestock program is pasture development where feeds can be sourced out. To minimize cost, feeds will be formulated for the swine component.

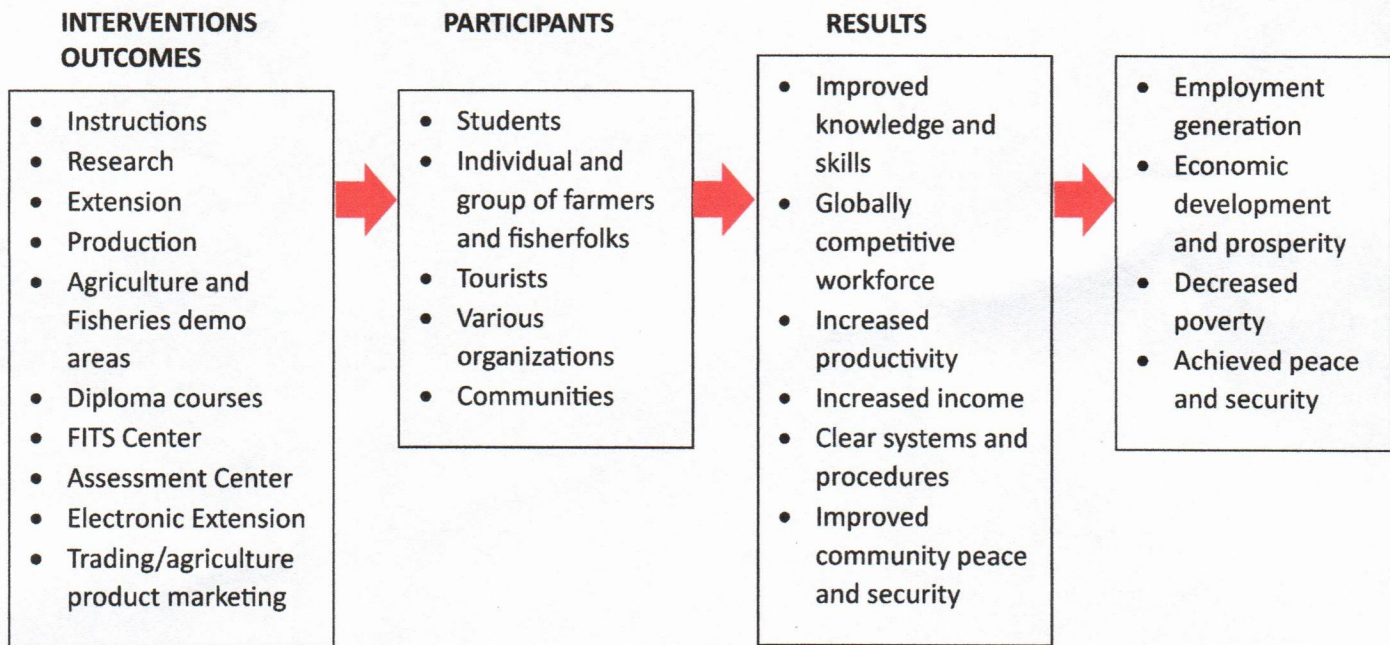

Poultry

Poultry will be raised in free-range both for meat and eggs to minimize cost particularly feeds. Its droppings will also fertilize the area where they are raised. The area will be compartmentalized depending the species raised and stage of growth to hasten their development.

Aqua-Culture

Areas with ample water supply whole year round will be used for aquaculture production. Various aquaculture species like tilapia, hito, fresh water shrimps and shells are not only for tourist attractions, instructions, research and extension but also for additional income generation similar with other components.

PROGRAM FRAMEWORK:

PROGRAM IMPLEMENTATION HIGHLIGHTS:

1. Area of Coverage

This program will involve the development of about twenty hectares of land owned by STII with major components of agriculture and fisheries. While the primary purpose of the development is for Agri-tourism, it will also complement the four main functions of STII as an Institution of Higher Education, which are Instruction, Research, Extension and Production. Therefore, it will not only provide services to tourists, farmers, fisherfolks in the communities but also to students of STII taking various courses.

- Deer
- 4. Poultry
 - Free range for meat and egg
 - Turkey
 - Ducks for meat and egg
 - Quail
- 5. Aqua-Culture
 - Tilapia
 - Hito
 - Fresh water shrimps
 - Fresh water shells
- 6. Organic fertilizer, concoctions, feeds and methane gas ✓
- 7. Farmers Information Technology System (FITS) ✓
- 8. TESDA Assessment Center for Agriculture and Fisheries ,
- 9. Electronic Extension (on-line courses in agriculture, Farmers Contact Center, on-line Marketing) ✓
- 10. Trading post/Agriculture product marketing
- 11. Diploma courses in Farm Business Management and Entrepreneurship with specialization in Farm Tourism

Inc., Sibugay Technical Institute Incorporated (STII) is one of the biggest if not the biggest in terms of enrollment among Higher Educational Institutions located in Ipil, Zamboanga Sibugay: "It envisions itself as a leading educational institution focusing on holistic formation of individuals for global competitiveness. It has a twofolds mission of providing responsive, relevant, and informative curricula as well as developing every Filipino holistically to become globally-driven workforce". Consonant to its vision and mission STII, offers a wide range of courses any student may chose depending on his/her priority preference.

STII also owns outside of its main campus, more than twenty (20) hectares of land that can be developed into an Agri-tourism area not only to attract tourists and investors but more importantly to be established with various mini-farms in crops, livestock, fisheries and various infrastructures to effectively and efficiently demonstrate the core functions of HEIs be undertaken. Thus, this proposed Agri-tourism Development Plan.

PROGRAM OBJECTIVES:

Aside from its main objective of being able to have an area where the functions of instruction, research, extension, and production will be properly carried out and demonstrated, this Agri-tourism development plan intends to establish and institutionalize the following:

1. Establish an area devoted/cultivated to various crops such as rice, corn, assorted vegetables and dwarf coconut.
2. Develop an area where various animal species will be raised and become productive.
3. Establish fish pond for the culture of tilapia, hito, fresh water shrimps and shells.
4. Set aside an area where container and vertical gardening can be demonstrated.
5. Strengthen the production of vermi-compost, organic concoctions, organic feeds, fertilizers including methane gas production.
6. Develop a mini forest planted with fruit trees and indigenous forest trees.
7. Strengthen the Farmers Information Technology System Center.
8. Establish a TESDA Assessment Center for Agriculture and Fisheries.
9. Establish the Electronic Extension Program (on-line courses in agriculture, Farmers Contact Center, and On-line marketing) for farmers and fisherfolks.
10. Offer Diploma Courses in Farm Business Management and Diploma in Entrepreneurship all with specialization in Farm Tourism leading to Bachelors Degree in Tourism

PROGRAM COMPONENTS:

1. Crops
 - Rice ✓
 - Corn ✓
 - Assorted vegetables ✓
 - Container and vertical gardening ✓
 - Dwarf coconut ✓
2. Mini-Forest
 - Assorted fruits trees
 - Indigenous trees
3. Livestock
 - Goats
 - Swine
 - Sheep

AGRI-TOURISM DEVELOPMENT PLAN

Sibugay Technical Institute Inc.

Ipil, Zamboanga Sibugay

PROGRAM BRIEF:

This Agri-Tourism Development Plan of the Sibugay Technical Institute Incorporated (STII) will also conform with the four (4) main functions of a Higher Educational Institution (HEIs). These four main functions are: Instruction, Research, Extension or Community Service and Production (Income Generation).

The function of Instruction in Higher Education "refers to the process of teaching and providing learning experiences to students aiming to help them acquire knowledge, skills, and understanding in a specific field of study. It involves facilitating learning through various teaching methods, including lectures, discussions, hands-on activities, and research projects."

Research is designed to "produce knowledge that advances the frontiers of respective fields. Through research institutions can contribute to society by producing new knowledge and discovering new ways of thinking about the world. It gives ability to gather relevant information from different sources and analyze it critically in order to develop a comprehensive understanding of a subject".

Extension or Community Service "refers to a function where institutions of higher education provide public service work, often directed towards the underserved, to promote social and community development. It involves transferring knowledge, technologies, and expertise to communities and individuals to improve their well-being and contribute social change.

Production or Income Generation "this can help policy makers, economists and educators analyze relationship between resources (inputs) and student outcomes (outputs). It is a form of learning whereby students create product or a concrete artifact that is the focus of learning. It is used to address allocative efficiency in the use of factor inputs in production and the resulting distribution of income of those factors".

PROGRAM RATIONALE:

Zamboanga Sibugay province, was founded in February 22, 2001 with an area 3,088 square kilometers composed of 16 Municipalities. It is currently experiencing rapid economic growth particularly in industries like mining, other services, and transportation. While agriculture, forestry, and fishing have seen a decline, the province boasts a diverse economy with strong agricultural production particularly crops like corn, rubber, and coconuts. The province is bordered by the provinces of Zamboanga del Norte in the north, Zamboanga del Sur in the East and Zamboanga City in the Southwest. Per 2020 survey, Zamboanga Sibugay has a population of 669, 840. Economy grew by 6.0% in 2023 bigger than the 4.5% of Zamboanga Peninsula. Zamboanga Sibugay is best known for its gorgeous white-sand beaches, caves and waterfalls.

The Municipality of Ipil is the capital and most populous municipality in Zamboanga Sibugay province. It is known as a significant commercial and investment center, attracting businesses and tourists. Officially created on July 26, 1949 by legislative enactment. It boasts a large income and population, making it a key economic hub in the region. The Municipality of Ipil is a host to three Higher Educational Institutions namely Sibugay Technical Institute Inc., Medina College, and Marian College,
